Budget Breakdown for Website Hosting

Architecting a Lightweight Cloud-Based Inventory and Financial Management System: A Mixed-Methods Evaluation of Decision-Making Efficiency in Philippine SMEs

Prepared for the Kodigo capstone prototype. This estimate separates an academic demonstration setup from paid production hosting.

Prices were checked on 8 November 2026. USD amounts use the latest BSP reference rate available on 6 November 2026: PHP 63.143 per US$1. Taxes, card conversion charges, and usage overages are excluded.

Academic prototype estimate

The prototype estimate uses free plans for the web application, database, and low-volume authentication email, plus one custom .com domain. It is intended for academic demonstrations and limited beta evaluation.

Cost component	Basis and limits	First year	Renewal year
Frontend hosting and HTTPS	Vercel Hobby for an academic demo; automatic HTTPS certificate after domain verification.	PHP 0	PHP 0
Database, authentication, and storage	Supabase Free; 500 MB database and 1 GB file storage. Inactive projects may pause after one week.	PHP 0	PHP 0
Authentication email	Resend Free through custom SMTP; up to 3,000 emails monthly and 100 daily, with a verified sending domain.	PHP 0	PHP 0
Custom .com domain	Namecheap standard rate: US$15.98 registration plus US$0.20 ICANN fee; US$19.98 renewal plus US$0.20 fee.	PHP 1,022	PHP 1,274
Database export and backup	Manual export and offline copy; staff time and any paid remote storage are not priced.	PHP 0 service fee	PHP 0 service fee
Total vendor cash estimate	**Rounded to whole pesos; taxes and usage overages excluded.**	**PHP 1,022**	**PHP 1,274**

Fit with the thesis budget

Chapter 3, Table 3.3 allocates PHP 1,500 for Cloud Hosting (Supabase) and PHP 1,500 for Domain and Web Hosting, PHP 3,000 combined. The prototype estimate is within that allocation. The difference is a contingency for taxes, price changes, or a later upgrade; it is not a prepaid provider credit.

Production option

For continuous use by an operating business, use the paid provider plans below. The annual service estimates include the first project on Supabase Pro and keep authentication email within the Resend Free allowance.

Production component	Price basis	Annual estimate
Vercel Pro frontend	US$20 per month; PHP 15,154 per year.	PHP 15,154
Supabase Pro database and Auth	US$25 per month; includes daily database backups retained for 7 days; PHP 18,943 per year.	PHP 18,943
Resend authentication email	Free within 3,000 emails monthly and 100 daily; verified sender domain required.	PHP 0

Production component	Price basis	Annual estimate
Custom .com domain	US$16.18 for first-year registration; US$20.18 for renewal, including the ICANN fee.	PHP 1,022 year 1 / PHP 1,274 renewal
HTTPS certificate	Automatically provisioned by Vercel after domain verification.	PHP 0
Total first year	**US$45 monthly services plus the first-year domain; before tax and overages.**	**PHP 35,119**
Total renewal year	**US$45 monthly services plus the annual domain renewal; before tax and overages.**	**PHP 35,371**

Budget and operational notes

The existing PHP 3,000 hosting allocation supports a limited academic demo on free tiers. Supabase Free has no automatic daily database backups and can pause after inactivity; schedule and verify manual exports. Supabase's default email service is limited to project team addresses and 2 messages per hour, so configure the included Resend Free SMTP allowance before inviting outside testers.

The paid production estimate annualizes Vercel Pro at US$20 per month and Supabase Pro at US$25 per month. It does not include optional paid SMTP beyond Resend Free limits, point-in-time recovery, extra database or storage usage, extra projects, paid support, tax, or payment-provider currency fees. Revise the project budget before business production deployment.
